Engineering America

Case Study

The Story of TWO “FIRSTS” for the Santee Sioux Tribe of Flandreau, South Dakota

Installed: 2010
Tank Type: Aquastore® Glass-Fused-To-Steel
Storage Capacity: 292,000 Gallons
Engineers: Cooper Zietz Engineers, Inc.
Contractors: Engineering America and Oakland Construction

PROJECT OVERVIEW:

In the early 1890s members of the Santee Sioux Tribe settled in the area now called Flandreau, SD. Efforts began immediately to secure the necessary means to build a boarding school for the members of the Santee Sioux Tribe, and in 1892 Congress passed the Indian School Act.

In 1893 The Riggs Institution opened its doors as the FIRST boarding school in the United States. Fast forward nearly 120 years, and thousands of student graduations later, today the Flandreau Indian School is still going strong. The American Recovery and Reinvestment Act of 2009 (ARRA) allowed funding for the Bureau of Indian Affairs to embark on a mission to revitalize the Flandreau Indian School campus and facilities.

In the fall of 2010 Engineering America, working with the project general contractor, Oakland Construction, completed the FIRST glass-fused-to-steel composite elevated tank in South Dakota! Looking for the best long-term investment, the Aquastore® glass-fused-to-steel composite elevated tank was chosen for its superior life cycle and the fact that it NEVER needs re-painting! Congratulations to Flandreau Indian School for serving students' educational needs since 1893.

In 1980 we made an innovative promise that our tanks would never need to be painted. No Aquastore® tank has been painted since – we are the authentic glass-fused-to-steel!
